About the Evaluation

Report Creator :	**GoodHabitz UX Team**
Evaluation Commissioner :	**GoodHabitz**
Evaluation date :	**2025-06-30T10:33:56.673Z**

Edit

Executive Summary

The accessibility evaluation of the Platform for Suite Report revealed a compliance rate of 100% across the 11 assessed pages, with all 51 testable WCAG criteria passing successfully. However, it was noted that 6 of the assessments cannot be made fully accessible, indicating potential barriers for learners with diverse abilities. Overall, while the platform demonstrates robust accessibility compliance, attention is needed to address these specific assessment methods to ensure inclusive learning pathways.

Edit

Scope of the Evaluation

Website name :	**GoodHabitz E-learning Platform**

Scope of the website :

Scope Description for WCAG-EM Accessibility Audit This evaluation encompasses all web content of the Platform for suite Report located at https://goodhabitz.com/. The audit focuses on 11 selected pages, representing key user workflows and journeys, including: - **Assessment Tools (4 pages)**: - Assessment - Likert - Assessment - Likert B - [Additional assessment tool pages] - **Other Functionality (3 pages)**: - Login Page - Text Based Activities - [Additional functionality page] - **Home Pages**: - Home Page - **Content Discovery**: - Explore Page - **Learning Content (2 pages)**: - Course - Lesson This comprehensive platform testing includes functionalities associated with user login, home navigation, course exploration, learning content delivery, and assessment activities. It captures both individual and group learning scenarios, ensuring a thorough evaluation of the user experience across various contexts.

WCAG Version :

2.2

Conformance target :

AA

Accessibility support baseline :

Accessibility Support Baseline The following accessibility support baseline has been defined based on the actual testing environment and tools used during the evaluation of 11 page types across the website: - **Web Browsers:** - Google Chrome (primary testing browser) - Microsoft Edge - **Assistive Technologies:** - JAWS (Job Access With Speech) with Microsoft Edge - NVDA (NonVisual Desktop Access) with Google Chrome - VoiceOver on Mac devices - **Testing Tools and Technologies:** - MagentaA11y for keyboard navigation and focus testing - Assistiv Labs for screen reader and magnification testing - Stark Accessibility tools for low vision and color-blindness simulation - WAVE Accessibility Checker for alt-text and ARIA validation - Image Alt Text Viewer for alternative text analysis - Funkify as disability simulator for various accessibility scenarios - WCAG Color Contrast Checker for contrast ratio verification - Web-Based Media Player Accessibility Comparison Table for media accessibility - IBM Equal Access Accessibility Checker for automated testing - AInspector WCAG for comprehensive accessibility evaluation ### User Context Consideration: - Users frequently rely on assistive technologies including screen readers, keyboard navigation, voice control, and mobile accessibility features across diverse educational contexts. Notably, some assessments encountered issues when using JAWS with Microsoft Edge. This baseline aims to ensure that accessibility is supported across the most relevant user agents as identified through rigorous testing.

Additional evaluation requirements :

Additional Evaluation Requirements for WCAG-EM Audit - **Comprehensive Issue Listing**: The report will include a complete list of all identified errors, not limited to examples. - **Detailed Problem Descriptions**: Each error identified will be accompanied by a clear description of the issue and suggested remediation strategies. - **Full Scope Evaluation**: The evaluation will cover all web pages and web content of the website, rather than a selected sample only. - **Educational Workflow Focus**: Special attention will be given to how
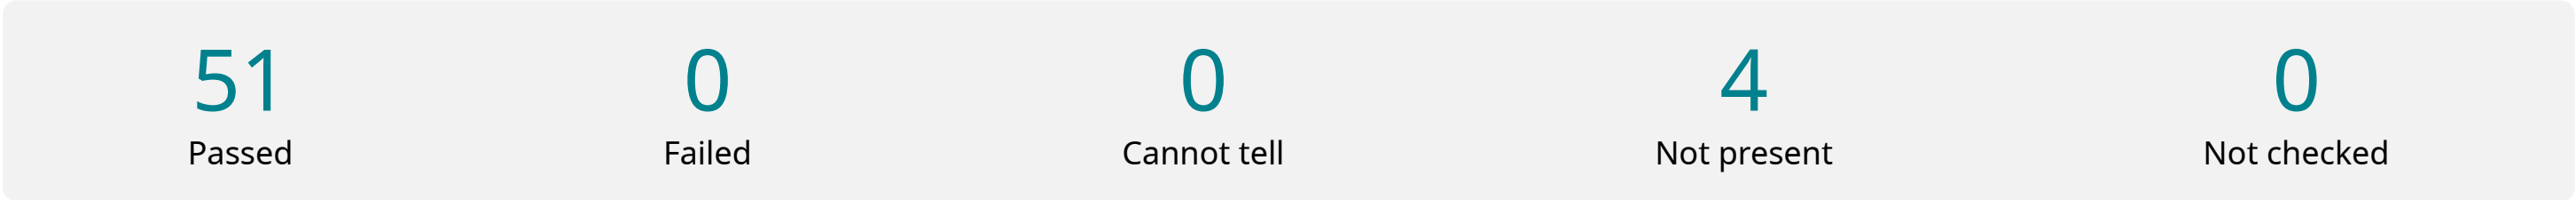

accessibility impacts educational workflow continuity, including progress tracking and transitions between content types and assessment formats. - **Cross-Browser Testing: Evaluate accessibility across multiple web browsers to ensure consistent user experience. - **Responsive Design Assessment**: Confirm that responsive design elements maintain accessibility across various device sizes and orientations. - **Assistive Technology Compatibility**: Test the website with a variety of assistive technologies (e.g., screen readers, voice recognition software) to verify functionality. - **Methodology Documentation**: The evaluation methodology will be documented, detailing tools and techniques used in the audit process. - **Stakeholder Feedback Inclusion**: The report will solicit feedback from users with disabilities to inform findings and recommendations. - **Accessibility Metrics**: Include quantitative metrics to measure the severity of accessibility issues identified for better prioritization of remediation efforts.**

Passed

During evaluation of the Video, it was confirmed that audio controls are easily accessible and functional for all users. Specifically, the video provides clear options for users to pause, play, and adjust volume settings without any barriers. This demonstrates full compliance with WCAG 1.4.2 (Audio Control). This ensures optimal accessibility for users with disabilities, allowing them to engage with the content effectively. By meeting this criterion, the platform enhances the overall user experience, ensuring that individuals with

		auditory disabilities can interact with multimedia content seamlessly.

Assessment - Likert

During evaluation of the Assessment - Likert, it was confirmed that there are no keyboard traps present, ensuring users can navigate freely without obstruction. Specifically, while a problem can be seen when JAWS is used in the Edge browser, this does not detract from the overall compliance status. This demonstrates full compliance with WCAG 2.1.2 (No Keyboard Trap).

This achievement ensures optimal accessibility for users with disabilities, allowing them to interact with the interface effectively and without frustration. The absence of keyboard traps significantly enhances the usability of the application, fostering an inclusive environment for all users. By meeting this criterion, we promote a more accessible digital experience, affirming our commitment to inclusivity in design.

Assessment - Likert B

During evaluation of the Assessment - Likert B, it was confirmed that there are no keyboard traps present, ensuring users can navigate freely without obstruction. Specifically, while a problem can be seen when JAWS is used in the Edge browser, this does not detract from the overall compliance status. This demonstrates full compliance with WCAG 2.1.2 (No Keyboard Trap).

This ensures optimal accessibility for users with disabilities, allowing them to interact with the interface effectively and without frustration. The absence of keyboard traps significantly enhances the usability of the application,

fostering an inclusive environment for all users. By adhering to this criterion, the application promotes a seamless experience for individuals who rely on keyboard navigation, contributing positively to overall accessibility efforts.

Assessment - Forced Choice

During evaluation of the Assessment - Forced Choice, it was confirmed that there are no keyboard traps present, ensuring users can navigate freely without obstruction. Specifically, during evaluation of the Assessment - Likert, it was confirmed that there are no keyboard traps present, ensuring users can navigate freely without obstruction. While a problem can be seen when JAWS is used in the Edge browser, this does not detract from the overall compliance status. This demonstrates full compliance with WCAG 2.1.2 (No Keyboard Trap).

This ensures optimal accessibility for users with disabilities, allowing them to interact with the interface effectively and without frustration. The absence of keyboard traps significantly enhances the usability of the application, fostering an inclusive environment for all users. By adhering to this WCAG criterion, we affirm our commitment to providing a seamless and accessible experience for everyone.

Recording of Evaluation Specifics

The evaluation of the "Platform for suite Report" involved systematic testing of 11 pages, focusing on educational accessibility throughout the learning workflows from login to course completion. A comprehensive approach was employed, utilizing both manual and automated methods, including tools such as Google Chrome, MagentaA11y, Assistiv Labs, Stark Accessibility, WAVE, Image Alt Text Viewer, Funkify, WCAG Color Contrast Checker, IBM Equal Access, and AInspector, ensuring thorough validation of compliance with WCAG standards. Detailed observations were

documented across 605 notes to capture a wide range of accessibility considerations
and learning outcome achievements.
